

## CONSUMER STORAGE EDUCATION SHEET

**IMPORTANT:** Water will destroy pellets. Pellet bags are not water resistant. Each bag contains small air holes. Take special care to prevent water absorption.

### OUTDOOR STORAGE:

- If possible, pellets should be stored indoors. Humid locations may require a dehumidifier.
- Green Supreme cover bags are water and UV resistant for 12 months.
- Do not remove the cover bag if pellets are stored outside. An additional tarp is recommended for extra protection.
- After opening a ton, we recommend moving all bags inside to a dry location. If not possible, re-wrap the ton with original cover bag or other water resistant cover.
- Pallets should not sit directly on grass or dirt. An additional pallet or platform should be used as bottom layer.
- Avoid abrasion of cover bags. Small holes allow water to penetrate. If tons are stacked two high, a slip sheet of OSB or plywood should be used.

**DISCLAIMER:** New England Wood Pellet is not responsible for damage incurred to pellets due to improper storage, shipping or handling.
